Doubles and Near Doubles Addition - ANSWER KEY

Grade 1 | Adding doubles and using doubles to solve near doubles | Version 1 of 10

Doubles are facts with two same addends, like 6 + 6. A near double is one more than a double, like 6 + 7.

Part A: Doubles

1. 5 + 5 = **10**
2. 3 + 3 = **6**
3. 8 + 8 = **16**
4. 10 + 10 = **20**
5. 7 + 7 = **14**
6. 9 + 9 = **18**
7. 1 + 1 = **2**
8. 2 + 2 = **4**

Part B: Near doubles. Tip: for 6 + 7, think 6 + 6 = 12, then 1 more is 13.

9. 5 + 4 = **9**
10. 2 + 3 = **5**
11. 2 + 1 = **3**
12. 4 + 3 = **7**
13. 3 + 2 = **5**
14. 9 + 10 = **19**
15. 7 + 8 = **15**
16. 1 + 2 = **3**
17. 8 + 7 = **15**
18. 5 + 6 = **11**
19. 4 + 5 = **9**
20. 3 + 4 = **7**
