# Doubles and Near Doubles Addition - ANSWER KEY

Grade 1 | Adding doubles and using doubles to solve near doubles | Version 2 of 10

*Doubles are facts with two same addends, like 6 + 6. A near double is one more than a double, like 6 + 7.*

**Part A: Doubles**

1. 4 + 4 = **8**
2. 6 + 6 = **12**
3. 2 + 2 = **4**
4. 7 + 7 = **14**
5. 3 + 3 = **6**
6. 9 + 9 = **18**
7. 8 + 8 = **16**
8. 1 + 1 = **2**

**Part B: Near doubles. Tip: for 6 + 7, think 6 + 6 = 12, then 1 more is 13.**

9. 6 + 7 = **13**
10. 9 + 8 = **17**
11. 10 + 9 = **19**
12. 8 + 9 = **17**
13. 6 + 5 = **11**
14. 7 + 6 = **13**
15. 2 + 1 = **3**
16. 2 + 3 = **5**
17. 8 + 7 = **15**
18. 3 + 2 = **5**
19. 4 + 3 = **7**
20. 7 + 8 = **15**
