Doubles and Near Doubles Addition - ANSWER KEY

Grade 1 | Adding doubles and using doubles to solve near doubles | Version 5 of 10

Doubles are facts with two same addends, like 6 + 6. A near double is one more than a double, like 6 + 7.

Part A: Doubles

1. 2 + 2 = **4**
2. 6 + 6 = **12**
3. 1 + 1 = **2**
4. 8 + 8 = **16**
5. 10 + 10 = **20**
6. 4 + 4 = **8**
7. 9 + 9 = **18**
8. 5 + 5 = **10**

Part B: Near doubles. Tip: for 6 + 7, think 6 + 6 = 12, then 1 more is 13.

9. 5 + 4 = **9**
10. 3 + 2 = **5**
11. 2 + 3 = **5**
12. 8 + 9 = **17**
13. 2 + 1 = **3**
14. 8 + 7 = **15**
15. 9 + 8 = **17**
16. 7 + 6 = **13**
17. 9 + 10 = **19**
18. 7 + 8 = **15**
19. 10 + 9 = **19**
20. 6 + 7 = **13**
