Whole Numbers as Fractions - ANSWER KEY

Grade 3 | Writing fractions such as 8/4 as whole numbers and whole numbers as fractions | Version 3 of 10

A fraction equals a whole number when the top number is a multiple of the bottom number. Example: 6/3 = 2, because 6 thirds make 2 wholes. Any whole number over 1 equals itself: 5/1 = 5.

Part A: Write each fraction as a whole number.

1. 60/6 = **10**
2. 32/4 = **8**
3. 20/4 = **5**
4. 27/3 = **9**
5. 24/8 = **3**
6. 30/3 = **10**
7. 30/6 = **5**
8. 4/4 = **1**
9. 4/2 = **2**
10. 8/8 = **1**

Part B: Write each whole number as a fraction with the denominator shown.

11. 4 (in fourths) = **16/4**
12. 3 (in halves) = **6/2**
13. 2 (in sixths) = **12/6**
14. 5 (in fourths) = **20/4**
15. 4 (in eighths) = **32/8**
16. 4 (in sixths) = **24/6**
17. 2 (in halves) = **4/2**
18. 2 (in thirds) = **6/3**
