Whole Numbers as Fractions - ANSWER KEY

Grade 3 | Writing fractions such as 8/4 as whole numbers and whole numbers as fractions | Version 7 of 10

A fraction equals a whole number when the top number is a multiple of the bottom number. Example: 6/3 = 2, because 6 thirds make 2 wholes. Any whole number over 1 equals itself: 5/1 = 5.

Part A: Write each fraction as a whole number.

1. 2/1 = **2**
2. 20/4 = **5**
3. 48/6 = **8**
4. 6/3 = **2**
5. 40/4 = **10**
6. 12/4 = **3**
7. 64/8 = **8**
8. 9/1 = **9**
9. 16/4 = **4**
10. 6/6 = **1**

Part B: Write each whole number as a fraction with the denominator shown.

11. 6 (in halves) = **12/2**
12. 3 (in thirds) = **9/3**
13. 3 (in sixths) = **18/6**
14. 5 (in eighths) = **40/8**
15. 2 (in fourths) = **8/4**
16. 6 (in fourths) = **24/4**
17. 4 (in halves) = **8/2**
18. 5 (in halves) = **10/2**
